

An idea becomes a world.

A playful invention studio for curious children.

Draw a creature. Give it a voice. Build its world.
Make something your friends can actually play.

So many ways to make it real.

Today's remarkable tools. Ideas entirely their own.

FIRST 6 VISITS

Discover new creative powers.

Draw and explore AI images. Create voices, sound and music. Try coding, buttons and sensors. Shape ideas through 3D design and making.

YOU SEE THE THINKING.

Project notes show what your child chose, tried, noticed and changed, including the help they received and a thoughtful next challenge.

Educators guide the work. Adults operate AI tools under children's creative direction.

NEXT 6 VISITS

Choose an idea. Build it further.

Children combine the tools they love, create with other makers, test with real people and improve what they have made.

Let's talk about your child's ideas.

WhatsApp text or call +85260719902
